HD01	Very close to what already exists, purple leaf heart, interesting.	Bel colore e nell'insieme bella pianta	Beautiful flower and leaves, similar to other waterlilies.	Compared to 10 years ago, the number of petals has increased slightly, and the cup-shaped red is good.	Vert rich red colour even on the Sepals.	really love the waxy texture of the petals	I like this water lily very much. It blooms profusely and its colors are really beautiful. I hope that one day I can plant it in my garden!	Good flower color and quantity	The colour is nice , flower shape is quite elegant but still not perfect.	N. A.	the flower color eye catching and the leaves kind of start from bronze turn to green,overall look special	Classic style of deep red hardy water lily hybrid.	Fairly bright red flower. Leaf with sinus which is covered on one part. The spiral-shaped blade retains a brown spot at the level of the petiole. The venation is clearly visible when the blade turns green.	The contrast between old and juvenile leaves is very pleasant. The flowers are pretty in shape and color. The contrast between the stamens and the heart of the flower is very pleasant. It's a pretty water lily.	Flower color, Shape looks common like other old hybrids.	love the flower shape also the free flowering look.	I'm a big fan of the combination of the flower shape and colour. According to the pictures it seems to be a very heavy bloomer compared to ones with the same colour. So that definitely is a big bonus.	nice red	Compact shape with intense red flowers
HD02	Close to Tangerine Pink, too close to existing ones, but very floriferous	Bel colore, sufficientemente fiorifera ma niente di particolare	A beautiful, even two-tone flower.	It reminded me of Nymphaea 'Siam Lucky' by Pairat	There are a lot of Pinks of this shape and colour in the trade	the pink outer petals and white inner petals form a nice contrast	This water lily has a beautiful gradient color and it is a double-flowered one. Love it!	Interesting flower shape and color	Every stuff is great! Impressive	N. A.	like the two tones color , the color from light to deep to outside very interesting	Similar to 'Siam Lucky'	Floriferous: interesting pink gradient. Closed sinus	The flower of this water lily is superb. The gradient from pink to white in the center is great. Too bad it produces so many leaves and seems to take up so much space.	Flower beautiful but it looks flower quantity is low.	Love the Gradation of outer petals to inner. It should be VERY good in another color tone also much more petals count.	Pink waterlilies, as there are already so many, it is difficult to introduce new ones that are different enough from the ones already registered. It definitely has a nice shape and colour combination with the gradation from lighter to darker pink. I do think the leafspread is too wide, but the flower itself has potential.	looks like Maya	Interesting color dilution
HD03	Close to Chatrat, less pretty. Wide open sinus typical of Chatrat, damaged flowers.	Pianta interessante anche con i petali arricciati, belle foglie	Beautiful two-toned, striped flowers, uneven petals, similar to existing waterlilies	There are photos with a lot of wrinkles, but is that what it should be?	Good variegation on Petals and some of leaves	sorry for the deformed flowers	The flower shape is a bit messy, but it also has its own characteristics.	not bad but a bit stingy with the flowers shape sometimes get malformed.	Flower shape is a bit disorder. leave shape sometimes get malformed.	N. A.	the flower not in general smooth petal , the color quite common	It doesn't look very robust overall.	Flower punctuation and interesting original flower shape. Leaf with marbling	It features a pink flower with very noticeable stripes. Its wrinkled side challenges us but gives it an original touch and catches the eye. It's a shame that the flowering period and the number of flowers are light, otherwise it could have taken the lead in the ranking.	Flower color & shape good.	In my opinion - the petals a bit too narrow, but nice try one.	It's always a pity you can only judge on a few pictures, so my feeling about the plant are based on those. I presume this plant will do much better when it's mature.	nice	Variable shape with striped color
HD04	N. Izia, a small water lily, but of very high quality. Never seen before	Sembra molto fiorifera ma troppe foglie e troppo simile a Joey Tomocick	A beautiful, profusely blooming waterlily. The flower is shaped like a torch.	Isn't it a rare flower type for yellow flowers? It looks beautiful, doesn't it? I wanted to see the real thing.	There are quite a lot of yellows of this shape and colour in the trade	cute medium sized cup shaped hybrid	It has very beautiful lemon-yellow flowers and blooms profusely. The proportion between the flowers and the leaves is also quite nice. I hope that one day I can plant this waterlily.	Beautiful	The flower shape is perfect. And the length of flowering time is quite long. The lemon yellow flowers are also perfect!	N. A.	the yellow color plus the shape very nice, but the sun burn on petal are noticeable	A great mexicana hybrid; it would be perfect if the petals were more abundant or had more distinctive features	Very beautiful water lily with many flowers pointed petals. Flower largely above the water. The leaves have one or two small points at the sinuses.	Very beautiful water lily with many flowers having a very pretty shape. The spotted foliage is superb. My only regret, the flower deserves a more pronounced color.	Blooming quantity is good.	Stunning one with very free flowers and also good flower shape	Well, I do love yellow waterlilies, so that's a direct advantage. I think the shape is really nice, I do not have any similar one in my collection and that's getting more difficult every year. The pictures show an abundance of flowers, so yes, love it!	Love this one	Very vigorous with copious and showy flowers
HD05	Very simple flowers already existing. Fuchsia pink, smaller and less beautiful than Bangkok Pink for example.	Molto bello il colore anche se già visto, fioritura importante	Bright flowers, blooming high above the surface of the water, abundant flowering.	Will it rise from the surface of the water and bloom profusely? It would be interesting if that was the case	Small number of petals. Not much improvement over existing pinks	very impressed that a hardy can stand above water such high	The flowers of this plant are cute.	nothing to add	Not bad, I think if the color be a little darker is better	N. A.	the amount of flowers and the height of this species are amazing	It is quite similar to the original species in various aspects, with average ornamental value.	Early season flowering rose. Flower emerges widely above the water. Leaf with closed sinus which retains a brown spot at the petiole. Olive-shaped bud.	A regret, "common" flowers.	Flower color is good & flower looks small in size.	Love the free flower but less petals count.	I think it's courageous to put in pink waterlilies for the contest, there are already so many. But I have to say, I would add this one to my collection. I'm truly fond of the way the flowers stand so high on sturdy stems. It seems to be a good bloomer too and if I'm correct the flowers are quite small. Good job.	classic pink	Remarkable flowering emerging
HD06	It's already seen, it's modern, but too common.	Bella forma del fiore ma poco fiorifera	Symmetrical flowers with lots of petals, similar to existing waterlilies.	Is this Nymphaea 'Puttan' from Thailand? If so, it's perfect with rhizome type, but I don't know because there is no photo that can identify the rhizome type	A pink with a large number of petals. Not much improvement over existing pinks.	perfect shape but not a good bloomer	The proportion between the flowers and leaves is excellent, and the double-flowered ones are really beautiful.	no news	Not bad	N. A.	the multi petal and the flower shape are point added , but the flower color very common	The flowers are double petals, but the flowering density is average, and the leaves are relatively large.	Very classic pink flower. Late flowering and growth. Distinctive foliage: brown spot at the attachment of the petiole and gradation from brown to green from the outside towards the center of the leaf.	A very beautiful flower poorly served by dull foliage and poor flowering in duration and quantity of flowers. Perhaps a plant that suffered from the trip.	Flower Color & Shape good.	What a wonderful flower shape, Love this so much.	If I compare it to the ones already on the market, I do not see a big difference. I'm afraid this waterlily needs to mature to reach it's full potential. That's sometimes an issue with contests, as you can only judge on a few pictures.	nice	Nice shape but not very floriferous
HD08	Close to Phuttakoon, nice double white, but it's really not new	Bella forma del fiore ma veramente troppa foglie	Symmetrical flowers with a large number of petals, profusely blooming waterlily.	Has this already been there since last year and has not been replanted?	A double white with numerous petals. Nice shape	love the perfect flower shape, healthy leaves and long flower season	Pure white double-flowered blossoms.	interesting shape but too much leaves	White colour is decent! But the flower quantity is still a bit low	N. A.	I like the white color and the multi petal, but some flower seems have the burning on petal too	The flowers are double-petaled, but in most cases, they have a slight wrinkling. The leaves are relatively large.	Double white flower. Fast growing.	A pretty white flower and plenty of it for this water lily. The flower is very bright. It has lots of foliage that leads us to believe there are still flowers hidden underneath. My overall rating is average because whites are becoming common.	Flower color good.	Nice one but still a like another hybrid that already occurred.	This waterlily seems to be a good choice for bigger ponds.	nice but leaves to big compared to the flowers	interesting flowers emerged
HD09	Already exists, without interest, much too common	Niente degno di nota	The flowers are similar to the flowers of existing waterlilies.	I think that the number of flowers is small and there are no characteristics	A not very deep red with lower number of petals. Not much improvement from existing reds	pretty charming color but sorry for the short flower season	Beautiful deep red flowers with waxy petals.	nothing to add	Dark red is really gorgeous like the red diamond	N. A.	the flower shape and color look very common	Classic style of deep red cold-hardy water lily. The petals are few	Red flower. Looks a lot like HD1 but less interesting.	Here is a water lily that seems not to have started correctly. Perhaps he is difficult or the journey has exhausted him. In any case, it is difficult to judge it correctly.	Flower Looks very common	too close to another hybrid but red tone is stunning one.	I don't think the pictures are able to show the full potential of the plant. It's nice to work with smaller red flowers, it would be wonderful if the leaves were smaller.	looks like 'Escarboucle'	Nothing special
HD10	Close to Jakkaphong, but it seems more floriferous, it is too close to what already exists.	Molto bella la fioritura e anche il colore	Symmetrical flowers with a large number of striped petals, abundant blooming.	It seems to bloom a lot, and it looks very beautiful when the pink is dark. But looks invasive	A pink with a large number of petals in good shape. Clear variegation on petals and some on leaves	long flower season, high flower quantity and the striking red - white contrast definitely make it a winner	The flower color has beautiful stripes.	some similarity with Jakkaphong but more generous	The flower shape is quite interesting and just looks like a cup, the colour is great too. And the leaf colour looks like chocolate!	N. A.	flower shape and color perfect plus the quantity of flower seems more easy to bloom than existing species	Pink, white, and red variegated petal type, with a moderate number of petals and abundant flowers. The leaves are slightly larger.	Floriferous. Pink-red flower punctuated with white or two-tone. Emerged flower. Leaf with pretty marbling. Nice.	I love this newish. The very marbled foliage at the start of the season, the quantity of flowers, the all different flowers, the white streaks on the petals and the pretty yellow stamens make this water lily a beautiful plant. I want it in my garden.	Flower color & Shape Nice.	love the splashed on the leaf and petal color.	I'm always sceptical for new pink waterlilies. This one though, it's really good. I would add to my collection in a heartbeat, well done!	Pretty	So special one, excellent plant
HD11	N. 'Snow Lady', the pink flower exterior is very original, but the slightly wrinkled flowers seem quite unstable.	Molto bella la forma e colore ma squilibrio tra numero di fiori e foglie	Flowers with a lot of petals, white flowers often with a pink skirt.	This is Snow Lady, isn't it? It should have been appreciated last year. I think it's a beautiful white flower even if the pink ring doesn't come out.	Numerous petals with a slight pink colour around the sepal area. A unique colour combination.	red-and-white contrast is striking but flowers are deformed at the early season	The flower shape is very beautiful and it blooms abundantly.	beautiful! The pink sepal is the plus! the shape is very good! I like it!	color is great	N. A.	the petal seems will change color make it have two tones visualization	The number of petals is very high. Although there is a slight wrinkling, the overall full flower shape and large flower quantity somewhat mask this flaw.	Early season flowers with pink and curly petal bases. The pink color fades during the season. It seems like it is not the same waterlily	Here's another blank. Well! not 3 colors for the same flower. Pink/fuchsia on the periphery, white and yellow for the heart of the flower. To complete the beauty of these flowers, they are well above the foliage as if avoiding it. The icing on the cake, sometimes very pink flowers. A water lily to have at home.	Flower color & shape are very good.	Stunning contrast of outer petal and inner color.	That pink base is of course beautiful and this would make it like an absolute winner. It just seems to me the pink disappears later in the season or when the plant matures maybe? Either way, it's a beautiful lady!	terrific	Beautiful shape, very floriferous
HD12	Already existing color, even for the flower shape, but the whole remains very pleasant. It's not really a novelty, but it's very pretty	Molto bello il colore, dimensioni e forma	Flowers with a large number of symmetrical petals, abundant blooming.	Many petal water lilies have increased, but this strain is still rare. I think it's good.	A light pink globular in shape	nice shape but pity that the flower fade with age	It has a beautiful starlike flower shape and waxy petals.	the color who change after 2 days is very interesting! Beautiful shape!	not bad	N. A.	common looking in market now days	The flower has a large number of petals with no wrinkling, featuring a relatively full, radial flower shape and a large number of flowers, which is distinctive. The filaments are red, and the petals have a strong texture, displaying characteristics of the red genes from Nymphaea alba var. rubra.	Floriferous, very double bright pink flower the first day, then light pink afterwards. Brown leaf.	This is a very floriferous water lily. A well-formed and well-opened flower that almost forms a ball. Very bright stamens which contrast with the pink of the flower. The generous size of the flower would almost make you forget its foliage which does not stand out with its different shades.	Nice Flower.	love the petal count but a bit to slender petal shape.	With so many pink waterlilies in the contest, it makes it difficult to choose. The flowers have a great shape and seem to be very good bloomers. I think it would do great in bigger ponds.	classic pink	Interesting shape
