| ISG01 | It already exists, no point in redoing what exists. | Niente di particolarmente eclatante | The flower is bright, rising above the surface of the water. Similar to existing waterlilies. | A violet ISG however with not many petals | Looks like Nymphaea 'Lavender Star', it is free-flowering but last year, this should be appreciated | simple but elegant | Beautiful lavender color. | not bad | The color is interesting and cute. | N. A. | the color common, not very eye catching | Flower color a little dull for me. Quite close to some existing varieties. | The color is rare and has a slightly 'vintage' feel. | An aerial leaf that stands out well from the foliage. The shape of the flower is perfect and it is very bright. Weak point, the leaves seem to yellow as they age and give the impression of a weak water lily. It's a nice ISG, but I find it common. | The flowers have a nice colour. | the color looks good but leaf shape and color need more developed. | classic purple ISG | Looks like common color & shape | Nothing special |
| ISG02 | Beautiful star flower with yellow heart. Really splendid, it's very interesting and new! | Molto bello il colore e la forma sembra opera di Florian | Very beautiful two-colored flowers with lots of petals. | A star-shaped ISG with a large number of petals. White-blue colour petals. Unique. | This looks like Nymphaea 'Shiva'. The petals curl inward and open, making it an indisputable work of art | really love this one, definitely a winner | It has a beautiful star-shaped flower pattern, a large number of petals, and its color is also gradient, which is really nice. | A must have! very very nice! | The color is magical, but if the flower shape be more decent, it will be perfect | N. A. | the color very beautiful , but the flower shape not very stable | Very nice ISG that combines the best of tropical and rustic varieties. It would just lack a marbled foliage to be perfect for me. The propagation seems limited. | The flower shape is very unique, and the flower color is quite special. It features a relatively rare double-petal form. The petals have slight wrinkling, but overall, it is very beautiful and impressive. | What a pretty flower above the foliage. The shape and color blue are a love for the eyes. It could have received full marks for overall impression if it had been much more productive in flowers and foliage. I really like him. Additionally, blue ISGs are rare and sought after. I think I have a place in the pool... | The bicoloured flowers are absolutely beautiful. The way they stand high above the water is really nice. | stunning one and thumb up for breeder. Love so much | wow! | Beautiful Color & Shape | interesting shape and gorgeous color |
| ISG03 | Purplish pink. floriferous and quite similar to existing ones such as Purple Fantasy, Purple Satin, Purple Cone | Assomiglia molto a Purple Silver | Very bright flowers, profusely blooming waterlily | A star-shaped violet ISG. | I guess it's free-flowering. But I think it's a bit old as a style. | most petals are crinkled and hooked | It has a beautiful purple color and a very tall flower stalk. | nothing to add | The color is perfect, but the flower shape is A bit disorder | N. A. | very common except the flower quantity | floriferous, interesting dark purple flower. Very open leaf sinus. The stamens curve which is quite specific. | It can be further improved. | An ISG also with an existing name. A significant growth would have compensated for this. More foliage would make the flowers stand out. Despite this, the "clusters" of flowers are superb. | Big fan of the dark colour of the flower. | beautiful purple blue also good on free flower | classic purple ISG | Color & shape looks very common | Nothing special |
| ISG05 | Very pleasant mix of young and pink. It's original and new. Like Alice Hénaux! | Colore molto bello anche se la forma delle foglie non mi convince | A beautiful two-toned flower with lots of petals. | A violet-white ISG with numerous petals. Quite unique. | Most of the photos during cultivation are disappointing. It's a tremendously beautiful and wonderful work, but the management hasn't captured it | stunning | It has very beautiful two-tone flowers with a large number of petals and the flowers are quite big. | woooow! | Colorful, like a little princess dress. The pattern is also relatively beautiful. The leaves have stripes that look like lightning, it is really interesting that I really like this | N. A. | outstanding color and flower shape | The flower can be very beautiful with these shades of yellow, white and purple. Some flowers have petals that curl. Some variegations on the foliage. The veins seem to become more pronounced at the end of the season (nutrient deficiency or specificity?). The foliage seems sensitive and has some deformations on the edges. | The flower color is very rare and beautiful, but the petals often wrinkle. However, the petals improve significantly in the later stages of blooming. After being planted for some time, there is noticeable improvement, and it becomes acceptable. The leaves have a unique appearance, with slightly prominent light-colored veins and occasional light mottling. The overall growth trend seems a bit slow | This is my favorite among the ISG. A fault, its lack of vigor. The lit effect of the petals is very pleasant and makes the flower very luminous. The flower is not provocative, but it overwhelms all others with its color, its softness and its delicacy. The size of the imposing flower makes us want to swim alongside it. I love this water lily. | What a wonderful shape and colour. | good on color combination and petals count. | Wonderful | Nice Flower & Flower Shape | Interesting color |
| ISG06 | Close to Pink Panther, simple flowers, but well marbled foliage easy to recognize, it is quite new and very interesting | Fiori molto belli e anche le foglie | Bright flowers, abundant blooming, tiger leaves. | A violet ISG with average number of petals. The shape is not quite right. | The pattern of the leaves is good but I have the impression that it is the previous HxT. | The flowers are held very high above the water, which is very nice, but I don't like the crown leaves. | It gives a strong tropical feel, especially with its leaves being really nice-looking. | very nice leaves. | I can't forget this one, Because it's color of flower and leaves are really impressive | N. A. | very common shape and color | floriferous, flower shape and color rather classic for an ISG. Its big yellow heart is interesting. Superb foliage worthy of a tropical variety. Impressive propagation speed! | The plant is overall very vigorous, with many flowers, although the petals are few. The leaves exhibit a mottled pattern inherited from tropical water lilies. Overall, it's quite good. | A common flower for an ISG. The main interest of this water lily is its superb marbled foliage with a very colorful underside. It is very generous in terms of foliage and flowers. Its vigor is a big advantage. | I can't imagine any other plant would win this contest. It just looks amazing. | love the leaf color and the splendid free flowers. | Nice leaves | Nice Flower | So special one, excellent plant |
